

Standard Street Sign Requirements

All Street Signs for the Development need to be installed and have passed Addressing Inspection prior to Building Permit approval. It is the developer/owner's responsibility to install all street signs for the development, prior to building permit approval. Street signs must be installed and inspected for all new developments, as the address for any type of building permit will be assigned to the internal street(s).

Street Sign Basics

- There shall be no use of punctuation (hyphen, period, apostrophe) on street signs.
- Cross blades are required at all intersecting streets and signs should be positioned so that the blades are parallel to the corresponding street.
- Sign blades must have the approved street name/spelling and proper street designation.
- 'All' street signs are to be installed for the development, prior to approving any building permits.
- Incorrect signs will be required to be corrected.
- If the street(s) are not built and permits are being submitted, signage can be placed at the main entry to the development and as roads are built, the street signs can be moved to their correct location.
- An inspection of all installed street signs is required. Signs shall reflect the street name and designations approved by E911 Addressing, as noted through Development Review project comments. Contact Addressing after signs are installed for inspection 407-665-5045, 407-665-5191, 407-665-5190 or email: addressing@seminolecountyfl.gov.
- For Street Sign requirements please contact the Seminole County Traffic Engineering Division at 407-665-5677.

Below are examples of designations to be abbreviated:

• Avenue	AVE	Parkway	PKWY
• Boulevard	BLVD	Pass	PASS
• Causeway	CSWY	Place	PL
• Circle	CIR	Point	PT
• Court	CT	Road	RD
• County Road	CR	Run	RUN
• Cove	CV	State Road	SR
• Drive	DR	Street	ST
• Highway	HWY	Terrace	TER
• Lane	LN	Trail	TRL
• Loop	LOOP	Way	WAY
